#### SM900W Load Table Notes

- 1) Column 'A' - Loads based on stress. Column 'B' - Loads based on L / 180 deflection. ( \* ) denotes stress governs.
- 2) Table lists lower value of bending or bearing resistance. **Italic** denotes web crippling governs.
- 3) For deflection loads other than L / 240 multiply column 'B' by the following factors:

DEFLECTION	MULTIPLIER
L / 240	0.75
L / 360	0.5

- 3) Load tables based on use of A653 Structural Quality Steel Sheet Grade 33 (maximum stress 29.7 Ksi).
- 4) Sum of specified roof live load & roofing weights to be equal or less allowable superimposed loads above.
- 5) Contact your **SAMSON METALS** representative for more information.
